DETAILED ACTION

Continued Examination Under 37 CFR 1.114

- 1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 25, 2007 has been entered.
- 2. The rejection of the claims on the ground of non-statutory obviousness-type double patenting as being unpatentable over claims 1-63 of U.S. Patent 6,656,236 is withdrawn in view of the terminal disclaimer.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Page 2

Art Unit: 1714

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-14, 18-22, 30-43, 47-51 and 56 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-35 of U.S. Patent No. 6,607,566. Although the conflicting claims are not identical, they are not patentably distinct from each other because the incorporation of the specific additives as set forth in the present claims would have been obvious, especially given that those additives are set forth in the dependent claims of the patent.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 30-43 and 47-51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dubin (US 5,284,492).

Dubin teaches an enhanced lubricity water and fuel oil emulsion (see column 3, lines 31-37). The emulsion can be either a water in fuel oil or a fuel oil in water emulsion (see column 3, lines 41-44). The oil phase comprises a light fuel oil, by which is meant a fuel oil having little or no aromatic compounds and consists essentially of relatively low molecular weight aliphatic and naphthenic hydrocarbons (see column 3, lines 45-49). Such fuels include diesel fuel (column 3, lines 61-68). The emulsions

Art Unit: 1714

advantageously comprise water-in-fuel oil emulsions having up to about 90% water by weight. The emulsions which have the most practical significance in applications when combusted alone are those having about 5% to about 50% water and are preferably about 10% to about 35% water-in-fuel oil by weight (see column 4, lines 7-15). Although demineralized water is not required, the use of demineralized water in the emulsion is preferred (see column 4, lines 30-35). The skilled artisan recognizing that the pH of demineralized water is about 7.

The emulsions are prepared such that the discontinuous phase preferably has a particle size wherein at least about 70% of the droplets are below about 5 microns Sauter mean diameter. More preferably, at least about 85%, and most preferably at least about 90% of the droplets are below about 5 microns Sauter mean diameter (see column 4, lines 38-44). An emulsification system is most preferably employed to maintain the emulsion. A desirable emulsification system comprises about 35% to about 85% by weight of an amide, especially an alkanolamide or n-substituted alkyl amine; about 5% to about 25% by weight of a phenolic surfactant; and about 0% to about 40% by weight of a difunctional block polymer terminating in a primary hydroxyl group. These compounds encompass Schercomid SO-A and Pluronic brand compounds (see column 5, lines 2-59). The addition of a component selected from the group consisting of dimer and/or trimer acids, sulfurized castor oil, phosphate esters, and mixtures thereof significantly increase the lubricity of the emulsion (see column 7, line 15- column 8, lines 1-28). The addition of a corrosion inhibitor is taught in column 8, lines 56 to column 9, line 2.

Dubin teaches that the apparatus used to prepare the emulsion is an in-line emulsifying device and the that the emulsion is formed by feeding both the water and the fuel oil in the desired proportions to the emulsifying apparatus. The emulsification system (additives) can either be admixed or dispersed into one or both of the components before emulsification. Dubin teaches the limitations of the claims other than the difference that is discussed below.

With respect to the composition claims, Dubin differs from the instant claims in not disclosing the claimed method of forming the emulsion. However, the patentability of a product does not depend on its method of production, *In re Thorpe*, 227 USPQ at 966. MPEP 2113.

- 7. Applicant's arguments have been fully considered but they are not persuasive.
- 8. Applicant argues that the prior art does not teach the step of aging. The examiner concedes this point. However, since the claims are written in product-by-process language no patentable weight has been given to the process steps, for it is well settled that once a product is fully disclosed in the prior art, future claims to that same product are precluded, even if that product is claimed as made by a new process.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cephia D. Toomer whose telephone number is 571-272-1126. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on 571-272-1119. The fax phone

Art Unit: 1714

number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
